MOBILE SHELVING RACKS

The mobile systems are a suitable and reliable solution for the archives, libraries, authorities and other institutions.

www.proman.cz

PRO
MAN®

The mobile racks distinctively increase the usage of space and decrease the needed storage area. The shelving racks are placed on the sliding undercarriage that shuttle on the rails. It is possible to place the rails into the floor or onto the existing floor.

The mobile system can be completed by the sliding door, locks of the undercarriage, linear and lateral dividers and other components according to the customer's wishes.

The storage shelves are adjustable by 25 mm. The bearing capacity is from 60 to 250 kg. The surface adjustment is done by the galvanizing or by the powdered colour in the shade RAL 7035 (bright grey). When wished so we can supply different colour shades.

ACCESORIES, EQUIPMENT AND OTHER POSSIBILITIES OF USAGE

– the storage drawers

– the systems for storing of the hanging document files – non-sliding
